

**IN THE CLAIMS**

Claims 1-26 (Cancelled).

27. (New) A solid-state image sensor comprising:
- a photoelectric conversion element for converting incident light into an electric signal charge;
  - an amplifying element for amplifying an electric signal from said photoelectric conversion element;
  - a reset element for resetting said photoelectric conversion element;
  - a select switch for selectively outputting the electric signal as a pixel signal from said amplifying element to a signal line;
  - a vertical scanning circuit for controlling said amplifying element; and
  - a horizontal scanning circuit for controlling said reset element.
